How To Use Interprenet FM Receivers

- 1.** Power on the receiver using the power button – hold the circular button on the front of the receiver.
- 2.** Plug your earbuds or headphones into the headphone jack on the top edge of the receiver. This step also powers the receiver on.
- 3.** Use the “CH -” and “CH +” buttons to select the channel number of your interpretation feed. An event organizer will tell you which channel number each language will be spoken on. Please give the receiver a few seconds to retrieve the signal. You can confirm this by seeing if the satellite icon is shown.
- 4.** Scroll the “Volume Wheel” on the top edge of the receiver to adjust the volume as needed.

Note: The FM receivers will automatically turn off if there are no earbuds or headphones plugged in.
